

Net Zero Commitment

Objective

PT Great Giant Pineapple (GGP) is dedicated to becoming a Carbon Neutral Organization by setting a Net Zero target by 2050 in the organization by reducing greenhouse gas emissions, promoting renewable energy programs, and encouraging all employees, stakeholders, and business partners to join carbon emission reduction programs.

The Company published our Net Zero Commitment, which is in the process of aligning with science-based target initiatives, and we set reduction targets for 2050.

Scope

The Net Zero commitment applies to all business unit of PT Great Giant Pineapple. GGP requires all business units to set a common goal of achieving carbon neutrality from operations owned or controlled by the Company by 2050.

Definition

- The Net Zero Emissions by 2050 Scenario (NZE Scenario) is a normative scenario that shows a pathway for the global energy sector to achieve net zero CO₂ emissions by 2050, with advanced economies reaching net zero emissions in advance of others.
- Science Based Targets initiative (SBTi): A global body that defines and promotes best practices in emissions reductions and net-zero targets in line with climate science.
- Carbon offset is a process that involves a reduction in, or removal of, carbon dioxide or other greenhouse gas emissions from the atmosphere in order to compensate for emissions made elsewhere.
- The “Company” means PT Great Giant Pineapple and all its business unit.

Policy Statement

We intend to neutralize remaining emissions and/or carry out further mitigation of emissions outside the supply value chain with the following activities:

1. Our first priority is to reduce carbon emissions across the three categories set out in the GHG Protocol Corporate Standard: Scope 1, 2 and 3. As part of our journey towards net zero emissions, we set intermediate carbon reduction targets for 2030, from a 2022 baseline:
 - a. To reduce scope 1 and 2 GHG emissions in absolute terms by 25% in 2030 from 2022 baseline.
 - b. To reduce absolute scope 3 GHG emissions from purchasing goods and services, activities related to fuel and energy, upstream transportation, and distribution 25% in 2030.
 - c. To achieve zero deforestation in all raw materials value chain related to deforestation with a target of fiscal year 2050.

2. Achieve a 50% reduction in carbon emissions (from Scope 1, Scope 2, and Scope 3) by 2030 compared to the base year of 2022 by reducing greenhouse gas emissions, promoting renewable energy programs, encouraging all employees, stakeholders, and business partners to join the cause of emissions carbon reduction program, in order to continuously minimize the carbon emissions of the organization.
3. The Company may purchase high-quality carbon credits that can help fund natural climate solutions and other activities outside our chain – including tree planting, forest protection, and, in certain cases, social programs for rural communities. This action is not a diversion from the company's plans because our business units are required to reduce emissions in line with our company goals.
