

Sustainable Agriculture Policy

Objective

As a company that relies heavily on nature to carry out its production, PT Great Giant Pineapple (GGP) is committed to implementing sustainable production practices through a natural resource regeneration approach. This policy is a guideline for implementing sustainable agricultural standards to achieve high-quality products without causing environmental and social damage.

Scope

This policy applies to all operations within PT Great Giant Pineapple, especially plantation areas owned by business units.

Definition

Sustainable agriculture is a farming concept aims to protect the environment and enhance the quality of natural resources to make the best use of nonrenewable resources while being socially responsible.

Policy Statement

We strive to provide the best quality products for our consumers without causing environmental and social damage. To do this, we are committed to implementing sustainable agriculture that focuses on:

1. We implement, maintain, and develop a Sustainable Agricultural System by carrying out integrated movements in social and environmental management, ecosystem preservation, maintaining biodiversity where we operate, mitigating climate change impact and reducing greenhouse gas emissions, water and soil conservation, integrated crop, and waste management, as well as building close relationships with workers and the community in efforts to implement sustainable agricultural standards in our Company.
2. We create continuous improvements regarding all aspects of the Sustainable Agricultural System referring to the Rainforest Alliance standards by emphasizing quality, product safety and handling, environmental improvement, occupational safety and health, and social responsibility, as well as following statutory and regulatory requirements and other applicable requirements.
3. We commit to developing and optimizing human resources through training programs and an effective reward system, creating ideal working conditions for all employees, and providing facilities to ensure workers' health.
4. We continuously apply and develop precision agriculture technology in the agricultural digitalization process, including sensor and IoT technology, to optimize inputs for plant needs while simultaneously providing environmental benefits.

5. We persist in increasing the efficiency of fertilizer use, optimize the use of organic fertilizers, and implement integrated pest control and biocontrol.
