

Packaging Commitment

Objective

Packaging is very essential to protect food and drinks to ensure products reach consumers in safe conditions, minimize food waste, and provide important information for consumers. This commitment concerns the product packaging distributed from PT Great Giant Pineapple's (GGP) private label production (non-brand products) and retail packaging for the brand products. Our plastics policy describes in more detail the use of plastic in our products and packaging.

GGP started using the best-quality recycled Polyethylene Terephthalate bottles that are made from 100% food-grade recycled plastics (which are also 100% recyclable) and 100% recycled tin-plate material used for canned products. We are committed to using 100% reusable and recyclable packaging for non-brand and brand products by 2030.

Scope

This packaging commitment applies to all business unit of PT Great Giant Pineapple.

Definition

- Packaging refers to all materials used to wrap, serve, or protect goods (primary and/or secondary packaging). This only includes post-consumer packaging, which includes packaging waste produced during the shipping process, before having reached the company's end consumer or customer.
- Reusable packaging is packaging which has been designed to accomplish or proves its ability to accomplish a minimum number of trips or rotations in a system for reuse.
- Recyclable packaging is packaging, or a packaging component is recyclable if its successful collection, sorting, and recycling are proven to work in practice.
- Recycled packaging is material that has been reprocessed from recovered (or reclaimed) material by means of a manufacturing process and made into a final product or a component for incorporation into a product.
- The "Company" means PT Great Giant Pineapple and all its business unit.

Policy Statement

The Company is committed to developing and managing product packaging that is used sustainably by considering the entire value chain, using resources efficiently and minimizing product packaging waste, especially plastic waste which is currently a global issue with our focus being as follows:

1. The Company ensures that the product packaging is safe and meets the food standard requirements. This action shows that the product packaging used by the Company is

able to maintain the safety and quality of the product in the hands of consumers while protecting the environment.

2. The Company strives to use more recycled materials in our packaging, to expand the use of recyclable plastic in brand products and increase the number of reusable packaging with a target of 100% use by 2030.
3. The Company ensures that the product packaging used can be recycled after use. This action will certainly help reduce the amount of waste in waste disposal sites so that the waste management process can take place more easily.
4. The Company is committed to environmentally friendly product packaging, particularly paper packaging materials that come from well-managed forests, as proven by certification on the packaging label.
5. The Company collaborates with suppliers to encourage the provision of packaging materials that are certified as environmentally friendly or declaration of packaging materials that are recycled and/or recyclable.
6. The Company is committed and actively participates in carrying out plastic waste reduction programs in our respective work areas and the company environment in general. The Company provides education, carries out outreach, and creates programs and targets for reducing plastic waste in their respective work areas. Employees are not permitted to use plastic bags/bags in all stalls, shops, in the work environment in Lampung operations.
7. The Company allocated Research and Development (R&D) centre that focusing on Packaging Development. Packaging R&D centre drives the development of practical packaging, sourcing of new materials, and eco-friendly packaging for the customers.
